

	raw data		representation			
	in-time-based	transform-based	shape-based	model-based	feature-based	iterative-based (embedded)
raw data	X	X	X	X	X	X
transformation		X				
representation			X	X	X	
clustering	X	X	X	X	X	
example						
algorithm	LKMA	DTW	DFT	VAR	tsfresh	GBTM
notes	<ul style="list-style-type: none"> <li>- low interpretability</li> <li>- ignore temporal order</li> <li>- sensitive to noise</li> <li>- same interval [in-time]</li> <li>- same length (no missing) [in-time]</li> <li>- sensitive to offset [in-time]</li> </ul>		<ul style="list-style-type: none"> <li>- poor fit with few observations</li> <li>- poor fit if assumptions violated [model, embedded]</li> <li>- dangerous if model fit is poor (e.g., over- or under fitting) [model, embedded]</li> <li>- often assumes the same parametric distribution [embedded]</li> <li>- slower with complex models [embedded]</li> </ul>			
	<ul style="list-style-type: none"> <li>+ no shape assumed</li> <li>+ fast modeling</li> <li>+ readily available software</li> <li>+ algorithms established in the field</li> </ul>		<ul style="list-style-type: none"> <li>+ reduced dimensional space</li> <li>+ more accurate than raw</li> <li>+ fast modeling</li> <li>+ readily available software</li> <li>+ robust to missing data</li> <li>+ varying intervals</li> <li>+ varying lengths</li> <li>+ often scalable performance (e.g., model fitted once)</li> <li>+ relatively few observations per trajectory</li> <li>+ high interpretability [model, feature, embedded]</li> <li>+ allows use of domain knowledge [model, feature, embedded]</li> <li>+ distinct cluster trajectories [embedded]</li> <li>+ good for prediction [embedded]</li> </ul>
